

## Loadable kernel modules

Modules are conventionally stored as:

/lib/modules/version (version is ~~the~~ kernel ver  
like `$uname -r`)

Inspect current loaded module: `lsmod`

Load a module: `modprobe snd-usb-audio`  
module name

Remove a module: `modprobe -r snd-usb-audio`

Get module config: `modprobe -C`, the wtf's  
will be in stdout.
